KYOCERA INTELLIGEN((E

Kyocera Intelligence provides hardware and software solutions to upgrade and refresh your network environment, including those developed by Dell, HP, WatchGuard, Cisco, RapidScale, Barracuda and others. Our solutions can provide the best platform for your environment that includes procurement of new hardware, provisioning and implementation. When license driven software require specific infrastructure for optimum performance, we will know which components are required.

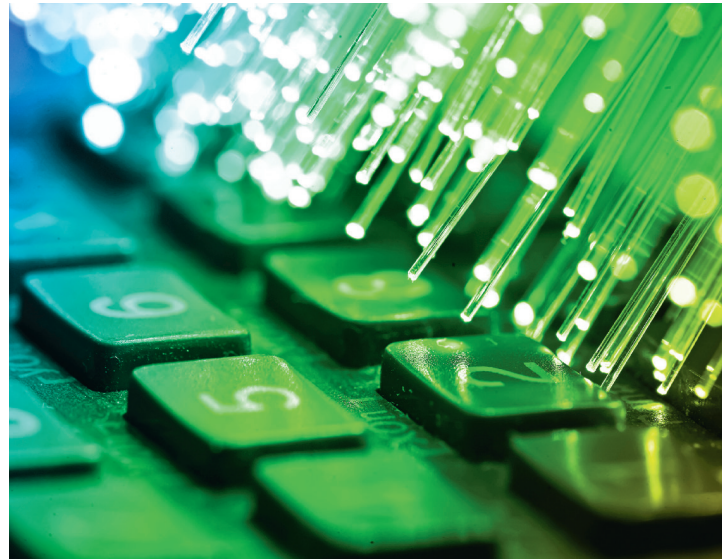

consulting

Our extensive knowledge of critical platforms allows us to recommend the appropriate solution for your specific needs. While many software solutions reside in the cloud, we will address all IT questions regarding the optimum functionality of your environment. From bandwidth utilization to storage optimization, we will work with you to provide solutions that guarantee maximum efficiency and cost savings.

cloud solutions

From email to large scale database applications, Kyocera Intelligence has a cloud solution for you.

We can design a hybrid IT cloud solution to address your evolving business needs. If you experience an interruption in your on-premise infrastructure, our cloud burst solution is available on two hours notice to replace it. New levels of RTO insure that your company can continue to operate in the event outages occur. Companies with multiple office locations in neighboring cities or from coast to coast, benefit from cloud solutions.

Kyocera Intelligence provides hardware & software solutions that save you time & money

Kyocera Managed IT Services and Kyocera Intelligence Cloud Services focus on minimizing, or all together eliminating the burden of managing, operating and optimizing a company's IT infrastructure.

make Kyocera Intelligence your Managed IT Services provider

A Managed IT Services provider offers management and support of IT network-based services, applications and equipment. As your business becomes more dependent on IT, the need for consistent performance at a predictable price empowers you to **focus on** your business **not in** your business. A reliable Managed IT Services Provider that allows business owners and employees to focus on their core functions has become critical. The scope of service provided varies according to each customer's unique requirements. Our approach to customizing a solution

begins with the Kyocera philosophy of doing what is right for the customer. So whether your needs involve simple system upgrades or full network management and support, the key element is that it is preventive and proactive in nature.

“Among current users of managed services, 46% of firms have trimmed their annual IT expenditures by 25% or more as a result of their shift to managed services, including 13% that have slashed annual IT expenditures by 50% or more on the IT functions they have given over to an MSP.”

- CompTIA, Trends in Managed Services study

Our Managed IT Services program provides peace of mind. We ensure that your IT environment is performing at optimal levels for a predictable monthly fee. Our reporting of system performance combined with our IT roadmap forecast allows you to focus on your business not your IT. With today's advances in cloud, virtualization and mobility solutions, Kyocera Intelligence will provide a hybrid solution to reduce your costs and insure that you are never out of touch.
